-

PROJECT A: EQUITY RESEARCH EXTRACTION PIPELINE

What This Does

Reads PDFs from 5 different document folders (Annual Reports, Concall Transcripts, Investor Presentations, Credit Rating Reports, Events & Announcements), extracts the high-signal information (NOT full verbatim dumps), and saves structured .txt files ready for dashboard generation.

Key Benefit: Converts raw documents into clean, analyst-ready extracts in ~20 minutes, dramatically reducing token consumption and time for Project B.

SECTION 1: FOLDER SETUP

Expected Folder Structure

Create a root folder for your research. Inside it, create these 5 subfolders (you can also name them slightly differently — the system is flexible):

[YOUR_RESEARCH_FOLDER]/

└─ Annual_Reports/	← .pdf files of annual reports here
└─ Concalls/	← .pdf files of concall transcripts here
└─ Investor_Presentations/	← .pdf files of investor presentations here
└─ Credit_Rating_Reports/	← .pdf files of credit rating reports here
└─ Events_Announcements/	← .pdf files of BSE/NSE filings, press releases, etc.

Important Notes:

- Subfolder names are flexible (case-insensitive). You can use annual_reports, Annual Reports, AnnualReports — all work.
- Empty folders are skipped automatically.
- Missing folders are skipped automatically.
- You don't need all 5 folders — only create the ones you have documents for.

Example Real Folder Path

On Mac:

/Users/Research/KEC_International/

└─ Annual_Reports/
└─ Concalls/
└─ Investor_Presentations/
└─ Credit_Rating_Reports/
└─ Events_Announcements/

SECTION 2: PRE-EXTRACTION CHECKLIST

Before you start, have ready:

- ✓ Root research folder created with your PDFs organized into the 5 subfolders
 - ✓ **Company full legal name** (e.g., "KEC International Limited")
 - ✓ **NSE ticker** (e.g., "KEC")
 - ✓ Access to Claude (either claude.ai or Claude app)
-

SECTION 3: STEP-BY-STEP EXECUTION

STEP 1: Prepare Your Prompt

You have two options:

Option A — Use the Full Workflow (Recommended for Beginners)

- Go to claude.ai
- Create a new chat
- Copy the entire **UNIFIED EXTRACTION MASTER PROMPT** from Section 4 below
- Paste it into your Claude chat
- Attach all your PDFs (you can drag-and-drop or click the attachment button)
- Type: **Ready. Company: [Company Name], Ticker: [TICKER]. Run extractions.**
- Wait for Claude to process and return the .txt files

Option B — Use Sequential Extraction (Advanced)

- Run each extraction separately, one document type at a time
- Use the individual prompts provided in Section 5 below
- This gives you more control but takes longer

STEP 2: Attach Your PDFs

1. Click the attachment / paperclip icon in your Claude chat
2. Select all PDFs from your research folder (you can multi-select)
3. Drag and drop them into the chat, OR
4. Click to browse and select files
5. Confirm the files appear in the chat message area

STEP 3: Confirm Company Details

In your chat message, clearly state:

Company: KEC International Limited

Ticker: KEC

Ready to extract.

Claude will scan your filenames and confirm it has the right company name and ticker. If it doesn't match, it will ask you to clarify.

STEP 4: Let Claude Run the Extractions

Claude will:

1. Scan all 5 folders
2. Show you a plan of what will be extracted
3. Ask for confirmation
4. Run all 5 extractions sequentially
5. Show you a summary when done

STEP 5: Download the Output Files

Claude will generate 5 files (or fewer if you didn't have all document types):

- [\[TICKER\]_AR_Extracts.txt](#) — Annual report extracts
- [\[TICKER\]_Concall.txt](#) — Concall transcript extracts
- [\[TICKER\]_InvestorPres.txt](#) — Investor presentation extracts
- [\[TICKER\]_RatingReports.txt](#) — Credit rating report extracts
- [\[TICKER\]_Events.txt](#) — BSE/NSE events and announcements

To download: Click on each filename in the chat. It will download to your Downloads folder.

Then: Move all 5 .txt files into their corresponding subfolders in your research folder:

Annual_Reports/	→ Move [TICKER]_AR_Extracts.txt here
Concalls/	→ Move [TICKER]_Concall.txt here
Investor_Presentations/	→ Move [TICKER]_InvestorPres.txt here
Credit_Rating_Reports/	→ Move [TICKER]_RatingReports.txt here
Events_Announcements/	→ Move [TICKER]_Events.txt here

SECTION 4: UNIFIED EXTRACTION MASTER PROMPT

Use this single prompt to extract all 5 document types in one session.

COPY-PASTE BLOCK — Extract Everything

Instructions before pasting:

1. Copy the text below starting from "I have 5 document folders..." (don't include this header)

2. Paste into your Claude chat
3. Replace all instances of [Company name] with your actual company name
4. Replace all instances of [NSE ticker] with your actual ticker
5. Attach your PDFs
6. Send the message

Begin copy-paste: (all text below in red)

I have 5 document folders containing PDFs for a company research project. I need you to extract high-signal information from each document type and save the outputs as structured .txt files.

COMPANY & TICKER

Company: [Company name]

Ticker: [NSE ticker]

EXTRACTION RULES

- Extract ONLY high-signal information (structured, condensed, analyst-ready)
- Do NOT reproduce full verbatim text unless specifically instructed. See each section for verbatim requirements (e.g., auditor report, accounting policy changes)
- Preserve exact numbers, dates, and specific claims
- Target output: concise analyst-ready extracts, not document dumps
- If a section is missing: write "Not disclosed / Not available"

DOCUMENTS ATTACHED

I have attached all PDFs from 5 categories (some may be empty):

1. Annual Reports
2. Concall Transcripts
3. Investor Presentations
4. Credit Rating Reports
5. Events & Announcements (BSE/NSE filings, press releases)

YOUR TASKS — Run in order:

TASK 1: ANNUAL REPORT EXTRACTION

Output filename: [TICKER]_AR_Extracts.txt

For each annual report year (process all years, most recent first):

SECTION 1 — MD&A KEY EXTRACTS

Extract ONLY:

- Industry growth rates cited (with source)
- Company market position / market share
- 2–4 bullets on structural demand drivers
- Segment performance (compact table: segment, revenue, EBIT/EBITDA, margin, YoY change)
- Margin movement drivers with specific magnitudes
- One-time items or exceptional factors
- Working capital / receivable / inventory commentary
- Forward-looking statements (verbatim quotes only, max 3–6 quotes)
- Risks flagged by management (skip generic boilerplate; include only context-specific risks)

SECTION 2 — NOTES TO ACCOUNTS HIGHLIGHTS

Extract ONLY forensic-relevant items (skip routine disclosures):

- Accounting policy changes (verbatim description)
- Depreciation / inventory valuation method changes
- Revenue recognition changes

- Any restatement or prior period adjustment (verbatim)
- Borrowings snapshot table (type, amount, rate, maturity)
- Capital commitments (total ₹ Cr + nature)

SECTION 3 — RELATED PARTY TRANSACTIONS

Compact table format (no verbatim reproduction):

| Counterparty | Nature | Amount (₹ Cr) | % of Revenue | Outstanding Balance |

Also include:

- KMP remuneration summary table
- Any loans to/from related parties or guarantees

SECTION 4 — AUDITOR'S REPORT

Preserve VERBATIM:

- Auditor opinion type (Unmodified / Qualified / Adverse / Disclaimer)
- Every Qualification text (full verbatim)
- Every Emphasis of Matter (full verbatim)
- Each Key Audit Matter (KAM) heading + auditor's response (full verbatim)
- Any "Other Matter" paragraph
- IFC opinion

Skip: routine boilerplate, responsibility paragraphs, signatory details.

SECTION 5 — SEGMENT DISCLOSURES

Compact table only:

| Segment | Revenue (₹ Cr) | Profit (₹ Cr) | Margin (%) | Assets (₹ Cr) | Capex (₹ Cr) |

Also include:

- Geographic revenue split table

SECTION 6 — EXTRACTION NOTES

One paragraph per year flagging: sections missing, non-standard language in auditor report, image-based pages, policy changes not clearly explained.

SECTION 7 — CONSOLIDATED FORENSIC DATA BLOCK (at end of file)

Structured format only:

CONSOLIDATED FORENSIC DATA BLOCK

Company: [Name] | Ticker: [NSE ticker]

Extracted: [Date]

AUDITOR

	FY23	FY24	FY25
--	------	------	------

Name:

Firm type (Big4/Mid/Small):

Tenure as auditor (years):

Key Audit Matters: [List each KAM heading per year. Flag if new, dropped, or changed year on year]

Emphasis of Matter:

Qualifications:

IFC Opinion:

RELATED PARTY TRANSACTIONS

FY25: [Counterparty | Nature | Rs Cr | % of revenue]

FY24: [Similar format]

FY23: [Similar format]

Trend note: [New counterparty appearing, transaction size growing, or nature changing]

CONTINGENT LIABILITIES

	FY23	FY24	FY25
--	------	------	------

Total Rs Cr:

% of net worth:

Key items: [List. Flag any item that grew >50% year on year]

CWIP (Capital Work in Progress)

	FY23	FY24	FY25
--	------	------	------

Opening Rs Cr:

Additions Rs Cr:

Capitalisations Rs Cr:

Closing Rs Cr:

Writeoffs:

% of gross block:

Ageing flags: [Any asset stuck >2 years without capitalisation and its amount]

EXTRACTION CONFIDENCE

	FY23	FY24	FY25
--	------	------	------

Auditor block: [High / Medium / Low]

RPT block: [High / Medium / Low]

Contingent liabilities: [High / Medium / Low]

CWIP block: [High / Medium / Low]

Overall notes: [Any block rated Medium or Low — state reason]

Output target: 2,500–4,000 words per year. All numbers with units (₹ Cr, %).

TASK 2: CONCALL TRANSCRIPT EXTRACTION

Output filename: [TICKER]_Concall.txt

For each quarter (process all quarters, most recent first):

HEADER

Company: [Name]

Quarter: [Q#FY##]

Date of Call: [Date]

Key Management Present: [Name – Title] for each

Analyst Firms Present: [List]

SECTION 1 — FINANCIAL PERFORMANCE SUMMARY

Numbers only in table format:

Metric Current Qtr YoY QoQ

Revenue (₹ Cr)

EBITDA (₹ Cr)

EBITDA Margin (%)

PAT (₹ Cr)

Order Inflow (₹ Cr)

Order Book (₹ Cr)

(Add other segment/KPI rows only if explicitly stated)

SECTION 2 — MANAGEMENT OPENING KEY EXTRACTS

Do NOT reproduce full opening statement. Extract only:

- Guidance statements (revenue growth, margin targets, order inflow targets)
- Changes to prior guidance
- Segment-level commentary with specific numbers
- Capex, debt, working capital outlook
- One-time items or exceptional factors
- Direct quotes for guidance phrases only

SECTION 3 — ANALYST Q&A HIGH SIGNAL EXCHANGES

Extract only questions and answers containing:

- Guidance clarification or pushback
- Margin drivers / headwinds
- Order pipeline, win rates, conversion timelines
- Working capital or cash flow concerns
- Competitive dynamics
- Segment / geography outlook
- Management walking back or upgrading statements

Format:

Q [Analyst name, Firm]: [Condensed question — 1–3 sentences]

A [Respondent, Title]: [Condensed answer — preserve exact numbers and forward-looking language verbatim. Paraphrase factual background.]

Skip: routine housekeeping questions.

SECTION 4 — GUIDANCE TRACKER

Compile all forward-looking statements into one table:

Topic	Guidance / Target	Timeframe	Prior Guidance (if revised)
Revenue growth			

| EBITDA margin | | | |

| Order inflow | | | |

| Capex | | | |

| Debt / Net D/E | | | |

| Other | | | |

SECTION 5 — KEY RISKS AND CONCERNS RAISED

List any risks, headwinds, or concerns (from management or analyst Q&A). Bullet format. 3–8 points.

SECTION 6 — NOTABLE MANAGEMENT COMMENTARY

Verbatim quotes ONLY where phrasing matters analytically (commitments, guidance walking-back, specific claims). Limit to 3–5 quotes per transcript. Label each with speaker name and context.

FILE SUMMARY (at end, after all quarters)

Documents processed: [Number]

Quarters covered: [List]

Date range: [Earliest to latest]

Extraction issues: [Any transcript incomplete or missing sections]

Output target: 800–1,500 words per quarter.

TASK 3: INVESTOR PRESENTATION EXTRACTION

Output filename: [TICKER]_InvestorPres.txt

For each presentation (most recent first):

HEADER

Company: [Name]

Presentation Title: [As stated on cover slide]

Date: [Date]

Occasion: [Earnings call / Analyst day / AGM / Investor day / Other]

Total slides in source: [Number]

SECTION 1 — KEY FINANCIAL HIGHLIGHTS

Headline numbers in table format:

Metric	Current Period	YoY	Comments	
--------	----------------	-----	----------	--

Revenue (₹ Cr)				
----------------	--	--	--	--

EBITDA (₹ Cr)				
---------------	--	--	--	--

EBITDA Margin (%)				
-------------------	--	--	--	--

PAT (₹ Cr)				
------------	--	--	--	--

Order Book (₹ Cr)				
-------------------	--	--	--	--

Order Inflow (₹ Cr)				
---------------------	--	--	--	--

(Add segment KPI rows only if on headline slide)

SECTION 2 — SEGMENT / BUSINESS PERFORMANCE

For each segment shown, extract:

- Revenue, margin, YoY growth
- Order book / pipeline if shown
- Operational metrics (capacity, utilisation, volume)
- Commentary box on slide (condense to 1–2 sentences)

Use table or structured bullet format.

SECTION 3 — STRATEGY & OUTLOOK SLIDES

Extract from strategy/outlook slides only:

- Strategic initiatives (1 bullet per initiative)
- Capex plan (total ₹ Cr + phasing + purpose)
- Capacity additions (location, size, timeline, commissioning)
- Medium-term guidance / targets (numbers verbatim)
- New product launches / geography expansion / M&A

SECTION 4 — CHARTS & DATA TABLES

For each chart/table:

- Extract all data labels and axis values
- Note chart title and what it shows
- Skip if purely illustrative with no numbers

Format:

****Chart: [Title]****

[Extracted data in table format]

[Short interpretation, e.g., "shows 18% CAGR FY22–FY25"]

SECTION 5 — MANAGEMENT MESSAGES / QUOTE SLIDES

If any slide features CEO/CFO quote or strategic message, reproduce verbatim with attribution.

SECTION 6 — ESG / SUSTAINABILITY SLIDES

Brief bullet summary (3–5 bullets). Preserve specific targets (e.g., "Net Zero by 2045", "30% renewable by FY28").

SECTION 7 — SLIDES DELIBERATELY SKIPPED

Brief note: "Skipped: Cover, Agenda, Thank You, Disclaimer, [N] decorative slides."

FILE SUMMARY (at end, after all presentations)

Documents processed: [Number]

Presentations covered: [List with dates]

Key numerical data captured: [Capacity / Guidance / Segment data / Order book — confirm each present or absent]

Extraction Issues: [Any slide or section poorly extracted / image-based / unreadable]

Output target: 600–1,200 words per presentation.

TASK 4: CREDIT RATING REPORT EXTRACTION

Output filename: [TICKER]_RatingReports.txt

For each report (most recent first):

HEADER

Company: [Name]

Rating Agency: [ICRA / CRISIL / India Ratings / CARE / Other]

Instrument Rated: [Name of instrument(s) with amount]

Rating Assigned: [e.g., AA / AA- / A+]

Outlook: [Stable / Positive / Negative / Watch]

Date of Rating: [Date]

Previous Rating: [If mentioned]

Previous Outlook: [If mentioned]

Rating Action: [Upgrade / Downgrade / Reaffirmed / Fresh / Watch]

SECTION 1 — RATING RATIONALE KEY POINTS

Condense into 4–8 bullets. Preserve specific numbers, margins, ratios, peer comparisons. No verbatim paragraphs.

SECTION 2 — KEY STRENGTHS

Bullet list — condensed. Each bullet 1–2 sentences. Preserve specific metrics (e.g., "order book 2.5x FY25 revenue").

SECTION 3 — KEY CONCERNS / RATING SENSITIVITIES

Bullet list — condensed. 1–2 sentences each with specific numbers where cited.

SECTION 4 — LIQUIDITY ASSESSMENT

One short paragraph OR 3–5 bullets covering:

- Liquidity categorisation (Strong / Adequate / Stretched / Poor)
- Cash balance (₹ Cr)
- Undrawn lines (₹ Cr)
- Near-term debt maturities (₹ Cr)
- Average bank utilisation (%)

SECTION 5 — FINANCIAL METRICS TABLE

Reproduce exactly as-is (preserve every number, every row):

| Metric | FY## | FY## | FY## |

(all rows from source)

SECTION 6 — RATING TRIGGERS

Two sub-headings:

****Upgrade triggers:****

- Bullet list — condensed. Preserve thresholds (e.g., "Net D/E below 0.5x sustained")

****Downgrade triggers:****

- Bullet list — condensed. Preserve thresholds.

SECTION 7 — OUTLOOK RATIONALE

2–4 sentences explaining the assigned outlook. Preserve forward-looking thresholds.

FILE SUMMARY (at end, after all reports)

Documents processed: [Number]

Agencies covered: [List]

Date range: [Earliest to latest]

Rating Trajectory: [One line — e.g., "Stable AA across 3 years" or "Upgraded A+ to AA in FY24"]

Outlook Trajectory: [One line]

Agency Divergence: [Flag if agencies differ in rating or outlook]

Extraction Issues: [Any section missing or poorly extracted]

Output target: 500–900 words per report.

TASK 5: EVENTS & ANNOUNCEMENTS EXTRACTION

Output filename: [TICKER]_Events.txt

Collate all announcement files (BSE filings, order wins, rating letters, press releases, etc.) into one structured events feed.

For EACH announcement, extract and structure as:

EVENT

Date: [DD-MMM-YYYY — infer from document if not explicit]

Category: [Order Win | Corporate Action | Rating Change | Regulatory/Policy | Management Change | Financial Result | Analyst Coverage | Other]

Source: [BSE / NSE / Press Release / Rating Agency / Newspaper / Exchange Circular / Other]

Headline: [One line — what happened]

Detail: [2–3 sentences — full context verbatim or closely paraphrased. Preserve all numbers exactly.]

Financial impact: [Quantify if possible — Rs Cr order value, rating change effect, equity dilution %, etc. If not quantifiable write "Not quantifiable from source."]

Significance: [HIGH / MEDIUM / LOW — your assessment of materiality]

Repeat for EVERY announcement in EVERY file.

After all events, add:

COLLATION SUMMARY

Total announcements processed: [Number]

Date range covered: [Earliest to latest]

Category breakdown: [Order Win: X | Corporate Action: X | Rating Change: X | Regulatory: X | Management Change: X | Result: X | Analyst Coverage: X | Other: X]

HIGH significance events: [List headlines only]

Extraction issues: [Any file unclear, image-based, or partially extracted]

SORT ALL EVENTS REVERSE CHRONOLOGICALLY (most recent first).

REMOVE DUPLICATES if the same announcement appears in multiple files (keep the version with more detail).

EXECUTION INSTRUCTIONS

1. Start with TASK 1 (Annual Reports). Read all attached annual report PDFs.
2. Once TASK 1 is complete, output: ✓ [TICKER]_AR_Extracts.txt complete
3. Move to TASK 2 (Concalls). Read all concall transcript PDFs.
4. Once TASK 2 is complete, output: ✓ [TICKER]_Concall.txt complete
5. Move to TASK 3 (Investor Presentations). Read all presentation PDFs.
6. Once TASK 3 is complete, output: ✓ [TICKER]_InvestorPres.txt complete
7. Move to TASK 4 (Credit Ratings). Read all credit rating PDFs.
8. Once TASK 4 is complete, output: ✓ [TICKER]_RatingReports.txt complete
9. Move to TASK 5 (Events). Read all event/announcement PDFs.
10. Once TASK 5 is complete, output: ✓ [TICKER]_Events.txt complete

After all 5 tasks are complete, output the final summary:

EXTRACTION COMPLETE

Company: [Name] | Ticker: [TICKER]

Completed: [timestamp]

✓ [TICKER]_AR_Extracts.txt

✓ [TICKER]_Concall.txt

✓ [TICKER]_InvestorPres.txt

✓ [TICKER]_RatingReports.txt

✓ [TICKER]_Events.txt

These output files are ready for Project B (Dashboard Generator).

KEY EXTRACTION PRINCIPLES

1. HIGH-SIGNAL EXTRACTION: Condense intelligently. Preserve exact numbers, auditor language (only for qualifications/KAMs), and analytically-weighted phrases. Paraphrase routine disclosures.

2. PRESERVE VERBATIM:

- Auditor qualifications and Key Audit Matters (KAMs)
- Guidance statements (growth targets, margin targets, capex plans)
- Board-approved accounting policy changes
- Specific management commentary with analytical weight
- All numerical values

3. PARAPHRASE / CONDENSE:

- MD&A boilerplate business descriptions
- Routine risk disclosures (currency, interest rate, unless elaborated)
- Routine working capital commentary
- Compliance language

4. SKIP ENTIRELY:

- Notice of AGM / Board approvals (dates only)
- Safe harbour disclaimers
- Operator scripts from concalls

- Decorative slides from presentations
- Vote-of-thanks from concalls

5. ALWAYS UNIT THE NUMBERS: ₹ Cr, %, x, MW, MT, etc.

6. MISSING SECTIONS: Write "Not disclosed / Not available [in specific document]"

7. IMAGE-BASED OR SCANNED: Extract what's possible; note in extraction issues.

Ready to proceed?

End of copy-paste block

SECTION 5: INDIVIDUAL EXTRACTION PROMPTS (ADVANCED USERS)

If you prefer to run extractions one at a time (more control, but slower), use these individual prompts.

EXTRACTION PROMPT 1: ANNUAL REPORTS ONLY

Company: [Company name]

Ticker: [NSE ticker]

Years attached: [infer from filenames, e.g., FY23, FY24, FY25]

You are an equity research analyst performing forensic and fundamental analysis.

Extract structured, high-signal content from each Annual Report. Do NOT reproduce full verbatim sections. Condense intelligently — preserve exact numbers, auditor language (verbatim only for qualifications and KAMs), and any non-standard commentary. Paraphrase routine disclosures.

Process each year separately. Label clearly. Output most recent year first.

For each year, produce these sections:

SECTION 1 — MD&A KEY EXTRACTS

Extract ONLY:

- Industry growth rate cited (with source if given)
- Company's market position / market share claims
- 2–4 bullets on structural demand drivers

****Segment Performance:****

Compact table of each segment's revenue, EBIT/EBITDA, and margin for the year + YoY change.

****Financial Performance Commentary:****

- Margin movement drivers (specific reasons with magnitudes)
- Any one-time items or exceptional factors
- Working capital / receivable / inventory commentary

****Outlook & Guidance:****

Verbatim quotes only for forward-looking statements (growth targets, capex plans, margin guidance). 3–6 quotes max.

****Risks & Concerns:****

Bullet list of risks management flagged. Include only risks with specific context — skip generic boilerplate unless elaborated.

SECTION 2 — NOTES TO ACCOUNTS HIGHLIGHTS

Extract ONLY items with forensic relevance. Skip routine disclosures.

****Accounting Policies — Changes & Red Flags:****

- Any change in accounting policy vs. prior year (verbatim description)
- Depreciation method / rate changes
- Inventory valuation method changes
- Revenue recognition changes
- Any restatement or prior period adjustment (always verbatim)

****Borrowings Snapshot:****

Type	FY## (₹ Cr)	Rate	Maturity
Secured LT			
Unsecured LT			
Short-term			

****Capital Commitments:****

Total ₹ Cr + nature (capex / investments / other)

SECTION 3 — RELATED PARTY TRANSACTIONS

Compact table format — NO verbatim reproduction:

Counterparty	Nature	Amount (₹ Cr)	% of Revenue	Outstanding Balance
--------------	--------	---------------	--------------	---------------------

****KMP Remuneration Summary:****

KMP Name	Role	Total Comp (₹ Cr)	YoY Change
----------	------	-------------------	------------

****Loans / Guarantees:****

List any loans to/from related parties or guarantees with counterparty, amount, and nature.

SECTION 4 — AUDITOR'S REPORT

****Preserve verbatim:****

- Auditor opinion type (Unmodified / Qualified / Adverse / Disclaimer)
- Every Qualification text (full verbatim)
- Every Emphasis of Matter text (full verbatim)
- Each Key Audit Matter — KAM heading + auditor's response (full verbatim)
- Any "Other Matter" paragraph
- IFC opinion (Unmodified / Adverse)

Skip: routine opinion boilerplate, responsibility paragraphs, signatory details.

SECTION 5 — SEGMENT DISCLOSURES

Compact table only:

Segment Revenue (₹ Cr) Segment Profit (₹ Cr) Margin (%) Segment Assets (₹ Cr) Capex (₹ Cr)
--

****Geographic Revenue Split:****

Geography Revenue (₹ Cr) % of Total

EXTRACTION NOTES

One paragraph per year flagging: any section missing or unusually brief, any non-standard language in the Auditor's Report, any pages that appeared image-based or poorly extracted, any policy change not clearly explained.

CONSOLIDATED FORENSIC DATA BLOCK (at end of file, after all years)

CONSOLIDATED FORENSIC DATA BLOCK

Company: [Name] | Ticker: [NSE ticker]

Extracted: [Date]

AUDITOR

	FY23	FY24	FY25
--	------	------	------

Name:

Firm type (Big4/Mid/Small):

Tenure as auditor (years):

Key Audit Matters: [List each KAM heading per year. Flag if KAM appears or disappears year on year.]

Emphasis of Matter:

Qualifications:

IFC Opinion:

RELATED PARTY TRANSACTIONS

FY25: [Counterparty | Nature | Rs Cr | % of revenue]

FY24: [Counterparty | Nature | Rs Cr | % of revenue]

FY23: [Counterparty | Nature | Rs Cr | % of revenue]

Trend note: [New counterparty appearing, transaction size growing, or nature changing across years]

CONTINGENT LIABILITIES

	FY23	FY24	FY25
--	------	------	------

Total Rs Cr:

% of net worth:

Key items: [List each item. Flag any item that grew more than 50% year on year.]

CWIP

	FY23	FY24	FY25
--	------	------	------

Opening Rs Cr:

Additions Rs Cr:

Capitalisations Rs Cr:

Closing Rs Cr:

Writeoffs:

% of gross block:

Ageing flags: [Name any asset stuck more than 2 years without capitalisation and its amount]

EXTRACTION CONFIDENCE

	FY23	FY24	FY25
Auditor block:	[High / Medium / Low]		
RPT block:	[High / Medium / Low]		
Contingent liabilities:	[High / Medium / Low]		
CWIP block:	[High / Medium / Low]		
Overall notes:	[Any block rated Medium or Low — state reason and what was unclear]		

OUTPUT RULES

- Target output length: 2,500–4,000 words per year
- All numbers must carry units (₹ Cr, %, x)
- If a section is missing for a given year, write: *Not disclosed / Not available in AR*
- Write in crisp analyst prose — no filler, no boilerplate reproduction
- Auditor qualifications and KAMs are the ONLY sections where verbatim reproduction is required

EXTRACTION PROMPT 2: CONCALLS ONLY

Company: [Company name]

Ticker: [NSE ticker]

Quarters attached: [infer from filenames, e.g., Q1FY25, Q2FY25, Q3FY25, Q4FY25]

You are an equity research analyst. Extract only the high-signal sections from each concall transcript.

Do NOT reproduce full verbatim transcript text. Condense intelligently — preserve exact numbers,

management language on guidance/outlook, and verbatim quotes only where a specific phrase carries analytical weight.

Process all quarters. Output most recent quarter first.

For each transcript, produce the following structured sections:

HEADER

Company: [Name]

Quarter: [Q#FY##]

Date of Call: [Date]

Key Management Present: [Name – Title] for each speaker

Analyst Firms Present: [List firms]

1. FINANCIAL PERFORMANCE SUMMARY

Extract reported numbers only (no commentary). Use a compact table format:

Metric	Current Qtr	YoY	QoQ	
Revenue (₹ Cr)				
EBITDA (₹ Cr)				
EBITDA Margin (%)				
PAT (₹ Cr)				
Order Inflow (₹ Cr)				
Order Book (₹ Cr)				

Add other segment/KPI rows only if explicitly stated in the call.

2. MANAGEMENT OPENING — KEY EXTRACTS

Do not reproduce the full opening statement. Extract only:

- Guidance statements (revenue growth, margin targets, order inflow targets)
- Any changes to prior guidance
- Segment-level commentary with specific numbers
- Capex, debt, working capital outlook
- Any one-time items or exceptional factors called out

Format as labelled bullet points. Include direct quotes only for guidance phrases.

3. ANALYST Q&A — HIGH SIGNAL EXCHANGES

Extract only questions and answers that contain:

- Guidance clarification or pushback
- Margin drivers / headwinds
- Order pipeline, conversion timelines, win rates
- Working capital or cash flow concerns
- Competitive dynamics
- Specific segment or geography outlook
- Management walking back or upgrading prior statements

****Format:****

Q [Analyst name, Firm]: [Condensed question — 1–3 sentences capturing the core ask]

A [Respondent, Title]: [Condensed answer — preserve exact numbers and any forward-looking language verbatim. Paraphrase factual background.]

Skip routine housekeeping questions (technical difficulties, thank-yous, repeat of already-stated numbers).

4. GUIDANCE TRACKER

Compile all forward-looking statements made in this call into a single table:

Topic	Guidance / Target	Timeframe	Prior Guidance (if revised)
Revenue growth			
EBITDA margin			
Order inflow			
Capex			
Debt / Net D/E			
Other			

5. KEY RISKS AND CONCERNS RAISED

List any risks, headwinds, or concerns raised — either by management proactively or in response to analyst questions. Bullet format. 3–8 points.

6. NOTABLE MANAGEMENT COMMENTARY

Verbatim quotes only where exact phrasing matters analytically (e.g. a commitment, a walking-back of guidance, an unusually specific claim). Limit to 3–5 quotes per transcript. Label each with speaker name and context.

FILE SUMMARY (at end of file, after all quarters)

Documents processed: [Number]

Quarters covered: [List]

Date range: [Earliest to latest]

Extraction issues: [Any transcript incomplete, poorly formatted, or missing sections]

OUTPUT RULES

- Target output length: 800–1,500 words per quarter transcript

- Do not reproduce management preamble, operator scripts, safe harbour disclaimers, or vote-of-thanks exchanges
 - All numbers must carry units (₹ Cr, %, x)
 - If a section has no relevant content for a given quarter, write: *Not discussed / Not available*
 - Write in crisp analyst prose — no filler phrases
-

EXTRACTION PROMPT 3: INVESTOR PRESENTATIONS ONLY

Company: [Company name]

Ticker: [NSE ticker]

Presentations attached: [infer from filenames, e.g., Q4FY25 Earnings Presentation, Analyst Day FY24, AGM Presentation FY23]

You are an equity research analyst. Extract structured, high-signal content from each investor presentation.

Do NOT reproduce every slide verbatim. Focus on slides that carry numbers, strategy, guidance, or segment data.

Skip decorative, agenda, and recap slides. Output most recent presentation first.

For each presentation, produce:

HEADER

Company: [Name]

Presentation Title: [As stated on cover slide]

Date: [Date of presentation]

Occasion: [Earnings call / Analyst day / AGM / Investor day / Other]

Total slides in source: [Number]

1. KEY FINANCIAL HIGHLIGHTS

Extract headline quarter/year numbers. Table format:

Metric Current Period YoY Comments (one line)
Revenue (₹ Cr)
EBITDA (₹ Cr)
EBITDA Margin (%)
PAT (₹ Cr)
Order Book (₹ Cr)
Order Inflow (₹ Cr)

Add segment KPI rows only if shown on a headline slide.

2. SEGMENT / BUSINESS PERFORMANCE

For each business segment shown, extract:

- Revenue, margin, YoY growth
- Order book / pipeline if shown
- Key operational metrics (capacity, utilisation, volume)
- Any commentary box on the slide (condensed to 1–2 sentences)

Table or structured bullet format.

3. STRATEGY & OUTLOOK SLIDES

Extract from strategy, outlook, or guidance slides only. Structure as bullet points:

- Strategic initiatives flagged (1 bullet per initiative)
- Capex plan — total ₹ Cr + phasing + purpose
- Capacity additions — location, size, timeline, expected commissioning
- Medium-term guidance or targets (reproduce numbers verbatim)
- New product launches / geography expansion / M&A

4. CHARTS & DATA TABLES

For each chart or data table in the deck:

- Extract all data labels and axis values
- Note the chart title and what it shows
- Skip if purely illustrative with no numbers

Format:

****Chart: [Title]****

[Table of extracted data points]

[Short interpretation if relevant — e.g. "shows 18% CAGR in order book FY22–FY25"]

5. MANAGEMENT MESSAGES / QUOTE SLIDES

If any slide features a CEO/CFO quote or strategic message, reproduce the quote verbatim with attribution.

6. ESG / SUSTAINABILITY SLIDES (if present)

Brief bullet summary — 3–5 bullets. Preserve any specific targets (e.g. "Net Zero by 2045", "30% renewable mix by FY28").

SLIDES DELIBERATELY SKIPPED

Brief note listing categories skipped: "Cover, Agenda, Thank You, Disclaimer, [N] decorative slides."

FILE SUMMARY (at end, after all presentations)

Documents processed: [Number]

Presentations covered: [List with dates]

Key numerical data captured: [Capacity figures / Guidance / Segment data / Order book — confirm each present or absent]

Extraction Issues: [Any slide or section poorly extracted / image-based / unreadable]

OUTPUT RULES

- Target output length: 600–1,200 words per presentation
- All numbers must carry units (₹ Cr, %, x, MW, MT, etc.)
- Skip: cover slides, agenda, disclaimers, safe harbour, thank-you slides, purely decorative slides
- Flag explicitly any slide that appeared image-based with no extractable text
- Preserve structure and numbers; condense prose

EXTRACTION PROMPT 4: CREDIT RATING REPORTS ONLY

Company: [Company name]

Ticker: [NSE ticker]

Reports attached: [infer from filenames, e.g., ICRA FY25, CRISIL FY24, India Ratings FY23]

You are an equity research analyst. Extract structured, high-signal content from each credit rating report.

Do NOT reproduce full verbatim text of rationale, strengths, or concerns sections. Condense to bullet points

with all specific numbers preserved. Process all reports. Output most recent first.

For each report, produce:

HEADER

Company: [Name]

Rating Agency: [ICRA / CRISIL / India Ratings / CARE / Other]

Instrument Rated: [Name of instrument(s) with amount]

Rating Assigned: [e.g. AA / AA- / A+]

Outlook: [Stable / Positive / Negative / Watch]

Date of Rating: [Date]

Previous Rating: [If mentioned]

Previous Outlook: [If mentioned]

Rating Action: [Upgrade / Downgrade / Reaffirmed / Fresh / Watch]

1. RATING RATIONALE — KEY POINTS

Condense into 4–8 bullets. Preserve specific numbers, margins, ratios, and any peer comparisons cited. No verbatim paragraphs.

2. KEY STRENGTHS

Bullet list — condensed. Each bullet should capture the substance in 1–2 sentences. Preserve any specific metrics or claims (e.g. "order book 2.5x FY25 revenue").

3. KEY CONCERNS / RATING SENSITIVITIES

Bullet list — condensed. Each bullet in 1–2 sentences with specific numbers where cited.

4. LIQUIDITY ASSESSMENT

One short paragraph OR 3–5 bullets covering:

- Liquidity categorisation (Strong / Adequate / Stretched / Poor)
- Cash balance (₹ Cr)
- Undrawn lines (₹ Cr)
- Near-term debt maturities (₹ Cr)
- Average bank utilisation (%)

5. FINANCIAL METRICS TABLE

Reproduce as-is — preserve every number, every row. This is the one section where completeness matters.

Metric	FY##	FY##	FY##	

| (reproduce all rows from source) | | |

6. RATING TRIGGERS

Under two sub-headings:

****Upgrade triggers:****

- Bullet list — condensed. Preserve thresholds (e.g. "Net D/E below 0.5x sustained").

****Downgrade triggers:****

- Bullet list — condensed. Preserve thresholds.

7. OUTLOOK RATIONALE

2–4 sentences explaining why the assigned outlook was chosen. Preserve any forward-looking thresholds.

FILE SUMMARY (at end, after all reports)

Documents processed: [Number]

Agencies covered: [List]

Date range: [Earliest to latest]

Rating Trajectory: [One line — e.g. "Stable AA across 3 years" or "Upgraded from A+ to AA in FY24"]

Outlook Trajectory: [One line — e.g. "Stable throughout" or "Moved from Stable to Positive in FY25"]

Agency Divergence: [Flag if agencies differ in rating or outlook]

Extraction Issues: [Any section missing or poorly extracted]

OUTPUT RULES

- Target output length: 500–900 words per report

- All numbers must carry units (₹ Cr, %, x)

- If a section is not present in a report, write: *Not disclosed in this report*
- Preserve exact rating symbols including modifiers (+, –, Stable, Watch)
- Financial metrics table is the only section requiring full reproduction

EXTRACTION PROMPT 5: EVENTS & ANNOUNCEMENTS ONLY

Company: [Company name]

Ticker: [NSE ticker]

Files attached: [infer from filenames — e.g. BSE filings, order win press releases, rating letters, newspaper articles, exchange circulars]

Collate all attached announcement files into one structured events feed. Process every file regardless of format or source.

For each announcement extract and structure as follows:

EVENT

Date: [DD-MMM-YYYY — infer from document if not explicitly stated]

Category: [Order Win | Corporate Action | Rating Change | Regulatory/Policy | Management Change | Financial Result | Analyst Coverage | Other]

Source: [BSE / NSE / Press Release / Rating Agency / Newspaper / Exchange Circular / Other]

Headline: [One line — what happened]

Detail: [2–3 sentences — full context verbatim or closely paraphrased from source. Preserve all numbers exactly.]

Financial impact: [Quantify if possible — Rs Cr order value, rating change effect on borrowing cost, equity dilution %, etc. If not quantifiable write "Not quantifiable from source."]

Significance: [HIGH / MEDIUM / LOW — your assessment of materiality to the investment thesis]

Repeat for every announcement in every file attached.

After all events, add:

COLLATION SUMMARY

Total announcements processed: [Number]

Date range covered: [Earliest to latest]

Category breakdown: [Order Win: X | Corporate Action: X | Rating Change: X | Regulatory: X | Management Change: X | Result: X | Analyst Coverage: X | Other: X]

HIGH significance events: [List headlines only]

Extraction issues: [Any file that was unclear, image-based, or partially extracted]

Sort all events reverse chronologically — most recent first.

Remove duplicates if the same announcement appears in multiple files. Keep the version with more detail.

PROJECT B: EQUITY DASHBOARD GENERATOR

What This Does

Reads your 5 extracted .txt files (from Project A) plus a MasterData.xlsx file, and generates a beautiful, interactive 15-tab HTML dashboard. Every tab is an institutional-grade research section, complete with charts, forensic analysis, valuation models, and a live event feed.

Key Benefit: Converts extracts into a professional, shareable investment dashboard in ~15 minutes.

SECTION 1: PREREQUISITES

Before you can generate the dashboard, you need:

1. ✓ **All 5 extraction files** (from Project A) in their subfolders:
 - [TICKER]_AR_Extracts.txt in Annual_Reports/
 - [TICKER]_Concall.txt in Concalls/
 - [TICKER]_InvestorPres.txt in Investor_Presentations/

- [TICKER]_RatingReports.txt in Credit_Rating_Reports/
 - [TICKER]_Events.txt in Events_Announcements/ (optional but recommended)
2. ✓ **MasterData.xlsx** file in the root folder
- This is a Screener.in export with 5 tabs: Financials, Peers, Shareholding, Company, Ratios
 - **How to get it:** Go to screener.in, find your company, click Export (top right), choose Excel. Save it as [TICKER]_MasterData.xlsx in your root research folder.
3. ✓ Optional files (enhance the dashboard but not required):
- [TICKER]_Estimates.txt — analyst consensus / forward estimates (enables Tab 6: Estimates)
 - NSE delivery data CSV — if you have recent NSE microstructure data (enables Tab 13 enhancement)
-

SECTION 2: FOLDER STRUCTURE FOR DASHBOARD GENERATION

Your folder should now look like this:

[YOUR_RESEARCH_FOLDER]/

└─ [TICKER]_MasterData.xlsx ← Required

└─ Annual_Reports/

| └─ [TICKER]_AR_Extracts.txt

└─ Concalls/

| └─ [TICKER]_Concall.txt

└─ Investor_Presentations/

| └─ [TICKER]_InvestorPres.txt

└─ Credit_Rating_Reports/

| └─ [TICKER]_RatingReports.txt

└─ Events_Announcements/

 └─ [TICKER]_Events.txt (optional)

SECTION 3: STEP-BY-STEP EXECUTION

STEP 1: Open New Chat

Go to claude.ai and create a new chat (or use Claude app).

STEP 2: Copy & Paste the Dashboard Generation Prompt

Copy the prompt from **Section 4 below** and paste it into your Claude chat.

STEP 3: Attach All Your Files

Attach ONLY these files (click the attachment button):

1. [\[TICKER\]_MasterData.xlsx](#)
2. [\[TICKER\]_AR_Extracts.txt](#)
3. [\[TICKER\]_Concall.txt](#)
4. [\[TICKER\]_InvestorPres.txt](#)
5. [\[TICKER\]_RatingReports.txt](#)
6. [\[TICKER\]_Events.txt](#) (if you have it)

You can drag and drop all files at once or select them one by one.

STEP 4: Send the Message

Type:

Company: [\[Company name\]](#)

Ticker: [\[TICKER\]](#)

[Files attached. Ready to generate dashboard.](#)

Click Send.

STEP 5: Follow Claude's Prompts

Claude will:

1. Scan all files and confirm they're present
2. Show you a PRE-GENERATION BRIEF (summary of what will be in the dashboard)
3. Ask you to confirm by typing GENERATE
4. Build the full 15-tab dashboard
5. Save the file as [\[TICKER\]_Dashboard.html](#)

Type GENERATE when prompted.

STEP 6: Download the Dashboard

Claude will provide the [TICKER]_Dashboard.html file. Download it.

Move it to your research folder or anywhere on your computer.

STEP 7: Open in Browser

1. On Mac: Double-click the .html file → opens in your default browser
2. On Windows: Double-click the .html file → opens in your default browser
3. Or: Right-click → Open with → Choose your browser (Chrome, Safari, Edge, Firefox)

The dashboard is now fully functional and works completely offline!

SECTION 4: DASHBOARD GENERATION MASTER PROMPT

⚠ COPY-PASTE BLOCK — Generate Full Dashboard

Instructions before pasting:

1. Copy the text below starting from "INSTITUTIONAL EQUITY RESEARCH DASHBOARD..."
2. Paste into your Claude chat
3. Attach all your .txt files and MasterData.xlsx
4. Type the company name, ticker, and "Ready to generate" in your message
5. Wait for Claude to show the PRE-GENERATION BRIEF
6. Type GENERATE to build the dashboard

Begin copy-paste: (All text below)

INSTITUTIONAL EQUITY RESEARCH DASHBOARD — MASTER PROMPT v4.0

PROJECT B — DASHBOARD GENERATOR

ROLE & OBJECTIVE

You are a head of equity research and a senior frontend engineer combined. Your task is to produce a single, complete, self-contained HTML investment dashboard for an Indian listed

stock — at the depth and rigour of an institutional research note presented to a fund manager's investment committee, rendered as a beautiful interactive web page. Every section must reflect the standards of a professional equity research analyst: direct verdicts, quantified claims, honest pushback on every bull point, and no hedging.

OUTPUT SPECIFICATION

Format: One complete HTML file. DOCTYPE included. All CSS in a single <style> block in the head. All JavaScript in a single <script> block at the bottom before the closing </body> tag. No inline styles except for dynamic values. No external files.

Charts: Use Chart.js from <https://cdnjs.cloudflare.com/ajax/libs/Chart.js/4.4.1/chart.umd.min.js> only. No other external libraries.

Self-contained: All data hardcoded. Works fully offline after download.

Null handling: If a data point is missing, display ----- in the cell or field. Never display NaN, null, undefined, or a blank. Never break layout due to missing data.

Mobile responsive: CSS grid with auto-fit columns throughout. All tables horizontally scrollable on small screens.

Dark/light toggle: Top-right button. Light mode is default. No flash on load. Both modes must be fully functional.

Scroll behaviour: Every tab switch must call `window.scrollTo({ top: 0, behavior: 'smooth' })` so the user always starts at the top of the new tab regardless of their scroll position on the previous tab.

DESIGN SYSTEM

Colours:

- Navy #0F1F3D (headers, nav, key accents)
- Orange #E8701A (highlights, active states, verdict badges)
- Green #16A34A (positive, buy signals)
- Red #DC2626 (negative, risks, sell signals)
- Amber #D97706 (warnings, watch signals)
- Blue #1D4ED8 (optionality, information)

Cards: White #FFFFFF background, 1px solid #E2E8F0 border, 10px border-radius, box-shadow 0 1px 3px rgba(0,0,0,0.07)

Body backgrounds: #F8F9FC in light mode, #0F172A in dark mode

Card backgrounds in dark mode: #1E293B

CSS variables: Every colour and background value used anywhere in the HTML must be declared as a CSS custom property in both :root (light) and [data-theme="dark"]. Never reference a CSS variable that is not explicitly declared in both blocks. This is a hard requirement — undeclared variables render invisibly and are a common failure mode.

Typography: System-ui font stack. Body 16px line-height 1.6. All numbers in monospace font. Section headers: 11px uppercase orange, letter-spacing 0.12em, left accent bar (4px solid orange) + bottom border.

Tables: Font size minimum 15px. Table headers 13px uppercase. All th and td padding 10px 14px. Quarterly and multi-period tables must be horizontally scrollable with overflow-x: auto on a wrapper div.

Quarterly table orientation: Metrics always as rows. Time periods always as columns. Latest period highlighted with a light orange background. This is mandatory — never put time periods as rows.

Charts: Set `Chart.defaults.font.size = 13` and `Chart.defaults.color = textColor()` globally before building any chart. Legend labels 13px. Axis tick labels minimum 12px. Tooltip font 13px. Never leave `Chart.js` at its defaults.

Badges: Pill shape, 11px font, uppercase. Colour scheme: HIGH = red | MEDIUM = amber | LOW = green | OPTIONALITY = blue. Verdict badges: BUY = green | ACCUMULATE = orange | WATCH = amber | REDUCE = rose | AVOID = navy.

KPI cards: Each must have a 7-point sparkline SVG (30px height) beneath the main number where annual data exists.

Print stylesheet: @media print — hide nav, dark toggle, and tab buttons. Set body background to white. Expand all tab panes to display block so the full dashboard prints.

JAVASCRIPT RULES — NON-NEGOTIABLE

Rule 1 — ASCII numerics only: All numeric values in JavaScript arrays and arithmetic expressions must use ASCII characters exclusively. The Unicode minus sign (U+2212) is not a valid JavaScript operator and will cause a syntax error. Use only the ASCII hyphen-minus (U+002D, typed as -) for negative numbers.

Rule 2 — Chart type data constraints: Doughnut, pie, and radar charts must receive only positive numeric values. If a value is negative, express it as an absolute value and adjust the label to communicate direction.

Rule 3 — Independent chart guards: Each canvas element in a build function must have its own independent null guard. Never write `if (!ctx) return` at the top of a function that builds multiple charts. The correct pattern is:

```
const ctx = document.getElementById('chartId');  
  
if (ctx) { new Chart(ctx, ...) }
```

Rule 4 — ID-based tab switching: Tab panes must be shown and hidden using `getElementById('tab-N')` keyed directly to the button index. Never use `querySelectorAll('.tab-pane')` with index matching.

Rule 5 — Scroll to top: The `showTab` function must call `window.scrollTo({ top: 0, behavior: 'smooth' })` as its last line.

Rule 6 — Post-generation silent validation: Before considering the dashboard complete, internally verify: (a) no Unicode minus in any JS data array, (b) every canvas id referenced in JavaScript has a matching canvas element in HTML, (c) every CSS variable used in HTML or inline styles is declared in `:root`, (d) no doughnut, pie, or radar chart receives negative data values, (e) the `showTab` function uses `getElementById` not `querySelectorAll`. Fix any violations silently before delivering the file.

DATA PROCESSING PROTOCOLS

Protocol 1 — File bundle and input sequence

This project accepts these files per company, processed in this order:

File 1 — [TICKER]_MasterData.xlsx (mandatory): Tabs: Financials, Peers, Shareholding, Company, Ratios. Screener.in export format.

File 2 — [TICKER]_AR_Extracts.txt (mandatory): Annual report extracts for all available years plus Consolidated Forensic Data Block at the end. Produced by Project A.

File 3 — [TICKER]_Concall.txt (mandatory): All concall transcripts verbatim, most recent first. Produced by Project A.

File 4 — [TICKER]_InvestorPres.txt (mandatory): All investor presentations, most recent first. Produced by Project A.

File 5 — [TICKER]_RatingReports.txt (mandatory): All credit rating reports, most recent first. Produced by Project A.

File 6 — [TICKER]_Events.txt (optional): Post-concall announcements — BSE/NSE filings, order wins, rating letters, press releases. Feeds Tab 14 (Events) directly.

File 7 — [TICKER]_Estimates.txt or any forward estimates file (optional): Analyst forward estimates, consensus data, or broker note extracts. Feeds Tab 6 (Estimates) directly. If not attached, Tab 6 is omitted from the dashboard and the nav adjusts automatically.

File 8 — Last-minute PDF (optional): Any raw PDF too late for Project A processing. User specifies which tab it is most relevant to. Claude extracts content and routes it accordingly.

Protocol 2 — AR Forensic Data extraction

When [TICKER]_AR_Extracts.txt is present, automatically locate the CONSOLIDATED FORENSIC DATA BLOCK at the end. Extract all of the following before generation begins:

Auditor: name, firm type (Big 4 / mid-tier / small), tenure, all KAM headings verbatim, emphasis of matter, qualifications, IFC opinion.

Related party transactions: every counterparty, nature of transaction, Rs Cr value, percentage of revenue, year-on-year trend.

Contingent liabilities: every item listed, total Rs Cr, percentage of net worth, flag any item growing more than 50% year-on-year.

CWIP: opening balance, additions, capitalisations, closing balance, writeoffs, percentage of gross block, any ageing flags.

Accounting policy changes: any change to revenue recognition, depreciation life or method, inventory valuation, or reclassification between P&L and OCI across the available years.

If any item is marked Not found in extract, carry that status into the Forensics tab exactly as stated. Do not infer or estimate missing forensic data.

Protocol 3 — Pre-generation confirmation

Before writing any HTML, output this structured brief and wait for the user to respond with GENERATE:

PRE-GENERATION BRIEF

Company: [full legal name]

Ticker: [NSE ticker] | BSE: [code]

Sector / Sub-sector: [from Company tab]

Report date: [date of most recent data across all files]

Analyst verdict (preliminary): [BUY / ACCUMULATE / WATCH / REDUCE / AVOID — based on first read]

Conviction score (preliminary): [X / 10]

FILES

MasterData.xlsx: [tabs confirmed]

AR_Extracts.txt: [years covered]

Concall.txt: [quarters covered, most recent first]

InvestorPres.txt: [presentations found with dates]

RatingReports.txt: [agencies and dates]

Events.txt: [ATTACHED — date range | NOT ATTACHED]

Estimates file: [ATTACHED — filename | NOT ATTACHED — Tab 6 will be omitted]

Last-minute PDF: [ATTACHED — routed to Tab N | NOT ATTACHED]

FORENSIC SNAPSHOT

Auditor: [name | firm type | tenure]

KAMs (latest year): [list headings]

KAM change vs prior year: [new KAM / dropped KAM / no change]

RPT risk: [LOW / MEDIUM / HIGH]

Contingent liabilities: [total Rs Cr | % of net worth]

CWIP concern: [YES with detail | NO]

Accounting policy changes: [YES with detail | NONE FOUND]

Overall forensic: [CLEAN / AMBER FLAGS / RED FLAGS]

INSTITUTIONAL CHECKLIST

Forward estimates file: [attached — Tab 6 included | not attached — Tab 6 omitted]

Delivery / microstructure data: [attached | not attached — section will show data-not-available]

Segment margin data: [found in AR | not found — revenue split only]

DATA GAPS

[List every file missing, tab not found, or section marked Not found]

TABS TO GENERATE: [list with numbers, noting if Tab 6 is omitted]

Respond with GENERATE to proceed.

Trigger phrase: [Company name] — [NSE ticker] | All files attached. Confirm and generate.

NAVIGATION — 15 TABS (or 14 if estimates file not attached)

Build a sticky top navigation bar with these tabs in this exact order. Tab 6 (Estimates) is included only when an estimates file is attached; if not attached, skip it and renumber accordingly. All tabs keyboard-accessible.

Tab 0: Exec Summary

Tab 1: Overview

Tab 2: Business

Tab 3: Industry

Tab 4: Financials

Tab 5: Growth

Tab 6: Estimates [CONDITIONAL — only if estimates file attached]

Tab 7: Forensics

Tab 8: Valuation

Tab 9: Thesis

Tab 10: Risks

Tab 11: Concall

Tab 12: Cap. Alloc.

Tab 13: Ownership

Tab 14: Events

Narrative logic: Orient fast → Understand the business → Understand the ecosystem → Historical evidence → Forward estimates → Forensic gate → Price anchor → Verdict → Stress test → Texture → Capital quality → Who owns it → Live feed.

IMPLEMENTATION INSTRUCTIONS

1. Read ALL attached files in the order specified (Protocol 1).
2. Extract the Consolidated Forensic Data Block from AR_Extracts.txt (Protocol 2).
3. Output the PRE-GENERATION BRIEF as specified (Protocol 3).
4. Wait for the user to respond with GENERATE.
5. Once GENERATE is received, build the complete HTML dashboard with all 15 tabs (or 14 if estimates file absent), adhering to all Design System rules and JavaScript Rules 1–6.
6. Save the HTML file and present it to the user for download.

The full tab specifications (Tab 0 through Tab 14) are provided in the reference materials. Implement each tab exactly as specified, with all data extracted from the attached files.

End of copy-paste block (above this)

SECTION 5: DASHBOARD FILE DETAILS

What the Dashboard Contains

When generated, your dashboard will have **15 tabs** (or 14 if you don't have an Estimates file):

Tab Name	Content
0 Exec Summary	90-second verdict + conviction score + three reasons to own
1 Overview	Company snapshot + 3-year financials + key metrics
2 Business	Segment breakdown + business drivers + capex plans
3 Industry	Market size + competitive positioning + growth drivers
4 Financials	Full P&L, Balance Sheet, Cash Flow tables + 5-year history
5 Growth	Revenue & EBITDA growth trends + CAGR analysis + forward guidance
6 Estimates	Analyst consensus estimates + revisions (if estimates file attached)
7 Forensics	Auditor analysis + RPT risk + CWIP concerns + accounting flags
8 Valuation	Multiples analysis + DCF summary + peer comparison
9 Thesis	Bull case + bear case + key assumptions + sensitivity
10 Risks	Top 10 risks + probability assessment + mitigation
11 Concall	Latest management guidance + Q&A extracts + forward statements
12 Cap. Alloc.	Capital structure + dividend history + buyback activity
13 Ownership	Shareholding pattern + promoter pledging + institutional flows
14 Events	Live event feed — order wins, rating changes, BSE filings

File Output

After generation, Claude provides:

[\[TICKER\]_Dashboard.html](#)

This single file is fully self-contained (works offline, includes all CSS/JavaScript internally).

SECTION 6: HOSTING YOUR DASHBOARD (OPTIONAL)

Once you have the .html file, you can:

Option 1: View Locally (recommended for personal use)

- Double-click the .html file on your computer
- Opens in your default browser
- Works fully offline

Option 2: Share via Netlify Drop (recommended for sharing)

1. Go to <https://drop.netlify.com>
2. Drag and drop your .html file onto the page (create a folder in desktop)
3. Netlify generates a public URL
4. Share the URL with colleagues
5. Anyone can view without downloading

Option 3: Host on Your Server

- Upload the .html file to any web server
 - Access via URL from anywhere
-

COMPLETE WORKFLOW EXAMPLE

Here's a real-world example of the full extraction + dashboard pipeline:

Example: KEC International Limited (Ticker: KEC)

Phase 1: Setup (5 minutes)

1. Create folder: /Research/KEC_International/
2. Create 5 subfolders inside
3. Download 8 PDF annual reports → Annual_Reports/ folder
4. Download 4 concall transcripts → Concalls/ folder
5. Download 3 investor presentations → Investor_Presentations/ folder
6. Download 2 credit rating reports → Credit_Rating_Reports/ folder
7. Download 12 BSE announcements → Events_Announcements/ folder
8. Get Screener.in export → Save as KEC_MasterData.xlsx in root folder

Folder structure ready:

/Research/KEC_International/

└─ KEC_MasterData.xlsx

└─ Annual_Reports/ (8 PDFs)

└─ Concalls/ (4 PDFs)

└─ Investor_Presentations/ (3 PDFs)

└─ Credit_Rating_Reports/ (2 PDFs)

└─ Events_Announcements/ (12 PDFs)

Phase 2: Project A — Extraction (20 minutes)

1. Go to claude.ai, create new chat
2. Copy the UNIFIED EXTRACTION MASTER PROMPT from Section 4
3. Paste into chat
4. Replace [Company name] with "KEC International Limited"
5. Replace [NSE ticker] with "KEC"
6. Attach all 29 PDFs from all 5 folders
7. Type: Company: KEC International Limited, Ticker: KEC. Ready to extract.
8. Claude scans, shows plan, asks for confirmation
9. Type: Proceed
10. Claude extracts for ~15 minutes
11. Download 5 files:
 - [KEC_AR_Extracts.txt](#)
 - [KEC_Concall.txt](#)
 - [KEC_InvestorPres.txt](#)
 - [KEC_RatingReports.txt](#)
 - [KEC_Events.txt](#)
12. Move each to its corresponding subfolder

Phase 3: Project B — Dashboard Generation (15 minutes)

1. Create new chat in claude.ai
2. Copy DASHBOARD GENERATION MASTER PROMPT from Section 4

3. Paste into chat
4. Attach these files:
 - [KEC_MasterData.xlsx](#)
 - [KEC_AR_Extracts.txt](#)
 - [KEC_Concall.txt](#)
 - [KEC_InvestorPres.txt](#)
 - [KEC_RatingReports.txt](#)
 - [KEC_Events.txt](#)
5. Type: Company: [KEC International Limited](#), Ticker: [KEC](#). Files attached. Ready to [generate dashboard](#).
6. Claude shows PRE-GENERATION BRIEF
7. Review the brief, then type: GENERATE
8. Claude builds dashboard (~10 minutes)
9. Download: [KEC_Dashboard.html](#)
10. Double-click to open in browser → Perfect! 15-tab institutional dashboard

Phase 4: Use & Share (Ongoing)

- **Personal use:** Keep the .html file, open anytime in browser
- **Share:** Upload to Netlify Drop, share URL with team
- **Update:** Add new documents to subfolders, re-run Project A & B to get updated dashboard

Total time end-to-end: ~40 minutes for one company (after folder setup).

TROUBLESHOOTING & FAQs

Q: I'm getting an error "File not found" or "Cannot read property X of undefined"

A: This usually means:

1. A file is missing from a subfolder (check folder structure)
2. The filename doesn't match exactly (e.g., [KEC_AR_Extracts.txt](#) vs [KEC_ARExt.txt](#))
3. You're in the wrong folder

Solution:

- Go to your research folder
 - Look at each subfolder — confirm the .txt files are there
 - Check filenames carefully (case-sensitive on Mac)
 - If a file is missing, you need to re-run Project A extraction
-

Q: The extraction is taking too long. Can I speed it up?

A: Yes. Instead of extracting all 5 document types together, run them separately:

1. Run only Annual Reports (EXTRACTION PROMPT 1) → get [TICKER]_AR_Extracts.txt → save in Annual_Reports/
2. Run only Concalls (EXTRACTION PROMPT 2) → get [TICKER]_Concall.txt → save in Concalls/
3. Etc.

This divides the work into smaller chunks and reduces token usage per pass.

Q: The dashboard looks dark/weird on my computer. What happened?

A: Likely causes:

1. **Browser doesn't support CSS variables** — Update your browser (Chrome 49+, Safari 9.1+, Firefox 31+, Edge 15+)
2. **Dark mode is on by default** — Click the "☀️ / 🌙" toggle button (top right) to switch to light mode
3. **Zoom level is off** — Press Ctrl+0 (Windows) or Cmd+0 (Mac) to reset zoom

If still broken:

- Try opening the .html file in a different browser
 - Try right-clicking the .html file → "Open With" → Choose Chrome or Safari explicitly
-

Q: Can I edit the dashboard after it's generated?

A: Technically yes (it's just HTML), but not recommended. Instead:

Better approach:

1. Add new documents to your research folder subfolders
2. Re-run Project A extraction to update the .txt files
3. Re-run Project B generation to rebuild the dashboard
4. Download the new version

This keeps everything in sync and ensures all data is fresh.

Q: What if I don't have all 5 document types?

A: It's fine. The process is flexible:

- Missing Annual Reports? → AR tab will be empty, but dashboard still works
- Missing Concalls? → Concall tab will be empty, but dashboard still works
- Etc.

Just run extractions for the documents you *do* have, and skip the rest.

Q: How do I share the dashboard with someone else?

A: Two methods:

Method 1: Netlify Drop (Recommended)

1. Go to <https://drop.netlify.com>
2. Drag the .html file onto the page
3. Netlify generates a public URL (e.g., <https://optimistic-pike-12345.netlify.app/>)
4. Share the URL with anyone
5. No login required; anyone can view in their browser

Method 2: Email or Cloud Drive

1. Email the .html file directly to colleagues
 2. Or upload to Google Drive, OneDrive, Dropbox
 3. Recipient downloads and opens in their browser
 4. Fully functional offline
-

Q: Can I use this for other companies?

A: Absolutely! The process is identical:

1. Create a new folder for the new company
2. Organize PDFs into 5 subfolders
3. Get Screener.in export, save as [TICKER]_MasterData.xlsx
4. Run Project A extraction
5. Run Project B dashboard generation
6. Done!

You can build dashboards for unlimited companies using this pipeline.

Q: What if a PDF is image-based (scanned)?

A: The extraction prompts handle this:

- Claude will extract what it can from image-based PDFs
 - It will note in the "Extraction Issues" section that the PDF was image-based
 - The dashboard will still generate, but that tab may have less data
 - Consider using OCR tools (like Preview on Mac) to convert scanned PDFs to searchable PDFs first
-

Q: I made a mistake in the folder structure. Can I fix it?

A: Yes, easy fix:

1. Reorganize your PDFs into the 5 correct subfolders
2. Move the extracted .txt files to their corresponding subfolders (Annual_Reports/, etc.)
3. Re-run Project A & B if needed

No data is lost; just reorganize and re-run.

Q: Can I run this offline?

A:

Extraction (Project A): Requires Claude, so you need internet.

Dashboard (Project B): Once generated, the .html file works **completely offline**. You can:

- Download the .html file
 - Disconnect from internet
 - Open the file in browser
 - Use all features (tabs, charts, dark mode, etc.)
 - No data leaves your computer
-

Q: Is there a cost to use this?

A: It depends on your Claude plan:

- **Claude Free:** Limited usage per day, may hit limits with large extractions
- **Claude Pro:** Unlimited usage, recommended for regular research
- **Claude API:** Pay-per-token, cost-effective for batch processing

For occasional use: Claude Free is sufficient. For regular research (1+ companies per week): Claude Pro recommended.

Q: Can I customize the dashboard design?

A: The dashboard HTML is fully editable. You can:

- Change colors in the CSS (look for --color-navy, --color-orange, etc.)
- Modify tab content by editing the HTML
- Add custom calculations in the JavaScript

However, for most users, the pre-built design is professional and ready-to-use.

For advanced customization, you'd need basic HTML/CSS knowledge.

NEXT STEPS

1. **Start with one company** — don't try to do 10 at once
2. **Follow the folder setup exactly** — this is the most common source of errors
3. **Use the copy-paste prompts** — they're tested and optimized
4. **Keep a archive** — save each company's folder for future reference

5. **Iterate** — as you learn the prompts, you can optimize them for your specific needs
-

CONTACT & FEEDBACK

If you encounter issues or have suggestions:

1. Check the FAQ section above
 2. Review the error message — it usually tells you what's wrong
 3. Re-read the relevant section in this guide
 4. Try running the extraction or dashboard generation again (sometimes it's just a temporary issue)
-

Good luck with your equity research!

This guide was built by institutional equity researchers for institutional equity researchers. The goal is to systematize and accelerate the research process while maintaining analytical rigor.
